Solenne WIP Demo Script

Nov 5, 2026

Aim for 4:40. The limit is 5:00, so this leaves a 20 second buffer. The script is about 680 words, which is 4:40 at a relaxed speaking pace.

Part	Time	Rubric point it covers
1. Intro	0:00 to 0:20	Presentation clear and concise
2. The problem	0:20 to 0:50	Clear business model (why it exists)
3. Business model	0:50 to 2:00	Clear business model
4. Revenue model	2:00 to 2:30	Clear revenue model
5. Site demo	2:30 to 4:10	60% complete, items easy to understand, quality of media, clear layout, purchasing process, cohesive design
6. Setbacks and close	4:10 to 4:40	Discussion and resolutions to setbacks

The market strategy is not required for this video, so it is left out on purpose. Lines under **Say** are spoken. Lines under **Screen** are what to show.

1. Intro (0:00 to 0:20)

Screen: the Solenne home page, top of the page.

Say: Hi, I'm Chelsea Dimalanta, and this is Solenne, an online store for modest activewear made for women in Canada. Our motto is modest in cut, bold in motion. You may remember this project as MIS.Co. I've since rebranded it, and I'll explain why at the end. But first, why I started it.

2. The problem (0:20 to 0:50)

Screen: the waterfront photo in the hero, or cut to your face on camera for this part.

Say: When I started going to the gym, I spent more time tugging my shirt down than actually working out. Most gym clothes are short, tight or see-through. The modest options I could find looked too baggy, or outdated, nothing I'd actually want to wear. And I

know so many girls who feel the same way, especially as a new gym-goer. Some of them skip the gym altogether because they just don't feel comfortable there. I wanted clothes that cover what I want covered and still look cute. So I made Solenne.

3. Business model (0:50 to 2:00)

Screen: scroll slowly through the hero and the promise strip (full coverage, opaque, CAD, returns). Stop on "Why Solenne" while talking about the market.

Say, value proposition: Solenne sells activewear with real coverage that still looks good: long sleeves, longer hems, high rises and squat proof fabric, in styles you'd actually want to wear.

Say, market opportunity: My main segment is women aged 18 to 35, students and young professionals building a fitness routine. My second segment is women aged 36 to 50, often mothers getting back into exercise. Both dress modestly for faith, culture, comfort or personal preference. They live in Canadian cities and smaller towns where modest options are hard to find in stores, so for more variety they shop on their phones and find brands on Instagram, Facebook, and TikTok.

Say, competitors: Big brands like Gymshark carry some modest pieces, but most are formfitting. Modest specialists like HAYA, FITH, Dignitii, and LYRA exist, but are not in the canadian market. Although HAYA, for example, sells to Canada from a US site with mixed currencies and slow, costly shipping. Solenne competes on three things: a coverage rating on every product, a store built for Canada with prices in CAD, and a premium look closer to Aritzia and Lululemon.

Say, organization: Solenne is a solo venture, so I run design, the website, product and marketing myself, with a flat, fast way of making decisions. I built the site myself, host it on GitHub Pages, and use Canva for the logo and Google Gemini for product photos.

4. Revenue model (2:00 to 2:30)

Screen: scroll to the Clay Capsule banner and the "Build a set, save 10%" card.

Say: Solenne makes money from direct online sales, with tops from $72 and leggings at $98. Three things push revenue on top of that. Limited drops, like the Clay Capsule here, create urgency. A set discount gives 10% off when you buy a top and a bottom together,

which raises the average order. With an additional incentive to buy two items for free shipping across Canada for orders over 120$. And creator codes let fitness influencers give their followers 15% off, so I can track exactly which partner drives each sale.

5. Site demo (2:30 to 4:10)

This follows the use case from my proposal, from browsing to order confirmation. Keep clicks slow so viewers can follow.

1. **Screen:** click **Shop all**, then the filters **Gym** and size **M**. **Say:** Customers can search, or filter by category, activity, size and colour. Everything is priced in Canadian dollars.
2. **Screen:** open **Flow Long Sleeve**. Point at the photos, click a colour swatch, then open **Size guide** and close it. **Say:** Each product has studio photos, an in motion shot, colours, sizes from double XS to 3X, and a size chart in centimetres.
3. **Screen:** scroll to the **Coverage card**. **Say:** This is what sets Solenne apart. Every product rates sleeve, neckline, hem and rise from 1 to 4, so you know exactly how much it covers before you buy. It replaces the fitting room a store would give you.
4. **Screen:** pick size **M**, click **Add to bag**. Close the bag, scroll to **Complete the look**, open **Anchor Legging**, add size **M**. **Say:** I'll add a top and a legging. The bag tracks free shipping over $120, and since this is a top plus a bottom, the 10% set discount applies on its own.
5. **Screen:** type **CREATOR15** in the discount field and click **Apply**. **Say:** An influencer code gives 15% instead, and the site always applies the better deal.
6. **Screen:** click **Checkout**. Change the province from Ontario to Alberta and point at the tax line. Fill the form and click **Place order**. **Say:** Checkout calculates tax by province. Payment is a prototype for now, so no card is charged. And here's the order confirmation.

Tip: use your browser's autofill for the checkout form so this step stays fast. You can also speed this part up in CapCut.

6. Setbacks and close (4:10 to 4:40)

Screen: go back to the home page and stay on the hero photo.

Say: A few setbacks along the way. First, the name. MIS.Co read like a business acronym and said nothing about movement, so I rebranded to Solenne, after checking that the name wasn't taken by another activewear brand. Second, I had no product photography,

so I started with research and then generated consistent product and lifestyle photos with AI. Third, deployment. GitHub rejected my password, so I switched to token based sign in. Next, I'll add a logo and more colourways, decide whether to move to Shopify, and revise the site based on your feedback. Thank you, I'm happy to take questions.

Recording checklist

- [ ] Open the live site, chelseadimalanta.github.io/solenne, and hard refresh (Cmd+Shift+R) so the newest version loads
- [ ] Empty the bag before recording
- [ ] Browser full screen, zoom at 100%, other tabs and notifications closed
- [ ] Record the screen with QuickTime (File, New Screen Recording) or the Cmd+Shift+5 shortcut, with your voice on
- [ ] Show your face in a small corner frame if you can; the brief asks all presenters to be seen taking part
- [ ] Do one practice run with a timer and cut lines if you go past 4:45
- [ ] Edit in CapCut, then export and check the final length is under 5:00
- [ ] Upload at least 2 hours before lecture, and post the site URL on D2L
